

IMPORTANT TO REMEMBER:

- Take EC as soon as possible. Do not delay.
- Accidents happen. Get a supply of EC *before* you need it.
- Call your family planning clinic if you have questions and to learn about birth control methods that are right for you.

WHAT ELSE IS IMPORTANT TO KNOW?

- Emergency Contraception will **not** interrupt or harm an existing pregnancy. It will not interfere with a fertilized egg that has successfully implanted into the lining of the uterus.
- Emergency Contraception will **not** cause an abortion.

Facts about Emergency Contraception (EC)

A second chance when
you need it.

Have it in Advance

WHAT IS EC?

- EC is a higher dose of regular birth control pills. You can use it *after* unprotected sex.
- EC is very effective in preventing a pregnancy after unprotected sex but it is not 100% effective.
- EC is a back-up method: it is not a good substitute for a regular birth control method.

HOW DOES EC WORK?

- EC prevents ovulation, or the release of eggs from the ovaries.
- EC *may* prevent fertilization: it *may* thicken cervical mucus and make it difficult for sperm to pass through.
- There is *no* clinical evidence that EC interferes with a fertilized egg.
- EC will *not* interrupt or harm an existing pregnancy.

WHEN SHOULD I TAKE EMERGENCY CONTRACEPTION?

Take EC as soon as possible:

- If you have sex with no birth control protection.
- Your birth control did not protect you: Example: condom breaks, missed pills.
- Plan B® One-Step, Fallback Solo and levonorgestrel generic equivalents **are safe to use** after having a baby and while breastfeeding.

WHY IS TIME IMPORTANT?

EC works best to prevent a pregnancy if you take it *right after* unprotected sex

- You can take EC as late as 72 hours (3 days) after unprotected sex.
- EC is not recommended after 3 days.

ARE THERE ANY SIDE EFFECTS?

Sometimes, women who take EC may have side effects. After taking EC, you may:

- Feel a little sick to your stomach, or
- Feel like throwing up or vomiting, or
- Your breasts may feel sore.

WHAT ELSE SHOULD I DO?

Keep using your regular birth control method *after* you take EC.

- If you do not have a regular method of birth control, use condoms for protection.
- Contact your family planning clinic or healthcare provider *right* away to learn about your birth control options and to get a regular method that suits you.

WHAT IF I DON'T GET MY PERIOD?

If you do *not* get your period within three weeks *after* taking EC (or if your period is not normal), get a pregnancy test. Call your family planning clinic or healthcare provider if you have any questions.
